

ALBA-ARTHRO

a novel solution for better growth and healthier animals

Advantages:

- ☐ Improves and supports the development and maintenance of bones
- ☐ Optimizes the metabolism and absorption of minerals
- ☐ Supports the growth and mineralization of the skeleton
- ☐ Improvement of the egg shell quality in layers
- ☐ Support to the immune system

Composition(per lt):

Calcium chloride	30 000 mg
Sodium chloride	10 000 mg
Chondroitin sulphate	500 mg
Glucosamine	500 mg

Vitamins, Minerals and active Principles

Vitamin D3	200 000 IU
Orthophosphoric acid	30 000 mg
Choline chloride	50 000 mg
Hydroxy analogue of Methionine	10 000 mg
Manganese (chelate of glycine)	2 500 mg
Zinc (chelate of glycine)	2 500 mg
Copper (chelate of glycine)	100 mg
Biotin	15 mg

INSTRUCTIONS FOR USE:

Poultry: 500ml - 1000ml x 1000lt of water per 3 - 5 day

Layers: 500ml - 1000ml x 1000lt of water per 3 - 7 day

Pullets: 500ml - 1000ml x 1000lt of water per 3 - 5 day

Beef: 250ml - 500ml x 1000lt of water per 3 - 5 day

Dairy Cattle 200ml - 300ml per animal per day

Minimum or Maximum dosage depends on the health status of the animals

PACKAGING:

250 ml, 500 ml, 1 L (in bottles), 5 L 10 L and 25 L (in canisters), 220 L (drums) and 1000 lt (in IBC).

ALBAFARMA

ALBA-ARTHRO

a novel solution for better growth and healthier animals

ADVANTAGES

- Improves and supports the development and maintenance of bones
- Optimizes the metabolism and absorption of minerals
- Supports the growth and mineralization of the skeleton
- Improvement of the egg shell quality in layers
- Support to the immune system

Alba-Arthro an ideally-balanced liquid formulation consisting of highly available source of macro-minerals and trace elements in combination with specific nutrients such as Chondroitin sulphate, Glucosamine, Methionine and vitamins. It is studied to improve and support the development and maintenance of bones.

Rapid growth represents a challenge for skeleton and metabolism. Calcium is a very important element for the development of a normal skeleton and deficiency can occur in flocks of every age. This results in reduced bone mineralization, which in turn leads to rachitis, osteomalacia, and osteoporosis. Laying hens produce eggs with thin, brittle shells.

Unspecific symptoms, such as growth depression, poor immunity, and neurological disorders commonly occur. A solid foundation is the basis for high performance. The balanced blend in **Alba Arthro** facilitates the formation of a strong skeleton, a sound musculoskeletal system and an optimum and resistant egg shell.
